HTML Colors, CSS and Links.

The <div> tag defines a division or a section in an HTML document.

Modify the webpage created in Practical 1 with the following:

1. Align all the headings at the center.
2. Put your photograph under your name. Size of the photograph should be like a passport size photograph.
3. Add different background colours to Education Detail, Extracurricular and Social Media.
4. Change the default setting of the tag <a> such that the social media pages open in a new tab whenever the hyperlinks are clicked.
5. Change the style setting of the social media links to give them a look of a button. Also edit the setting so that the color of the button changes whenever the mouse hovers over the social link.
6. Using a float property in HTML style, create a link at the lower side of each heading such that whenever a link is clicked page scroll up at the start of the webpage.
